

VeriSign® Unified Authentication One-Time Password Token

User acceptance of security tools is a crucial factor in guaranteeing the success of security solution implementations for secure access to remote applications and networks. Furthermore, security measures need not be costly solutions that require sophisticated procedures with multiple steps and physical entries to authenticate users.

VeriSign's One-Time Password (OTP) Token enables strong authentication through an easy-to-use and highly cost effective token that complies with the Initiative for Open AuTHentication (OATH) standard and comes with a full warranty for the duration of your service (three to five year plans available). These clientless OTP fobs can be used with virtually any type of computer in any type of environment. Unified Authentication OTP tokens feature technology proven by millions of end users of enterprises and financial institutions around the world.

VeriSign Unified Authentication enables enterprises to utilize a single integrated platform for all their strong authentication needs. Unified Authentication reduces the cost of deployment by leveraging an enterprise's existing infrastructure while moving the complexity of security and scalability to VeriSign. Based on guidelines developed by OATH, the open reference architecture provides a common interface for managing all types of credentials from multiple vendors. By reducing the cost and complexity of strong authentication, the Unified Authentication solution enables more ubiquitous adoption of strong authentication, thereby propelling enterprises to the next level of innovation, sophistication, and complexity in online collaboration and commerce.

At VeriSign, we believe security shouldn't put you on the defensive. Done properly, security should free you to confidently pursue opportunities in commerce, communication, and collaboration. To do this requires significant security expertise to assess, design, deploy, and manage your security plan based on best practices and Intelligence and Control. For more Intelligence and Control goals, please contact our Unified Authentication Specialists at 650-426-5310 or email unifiedauthentication@verisign.com.

VeriSign operates intelligent infrastructure services that enable enterprises and individuals to find, connect, secure, and transact across today's global computer networks.

Where it all comes together.™
